

PREDICTIVE TECHNOLOGY SYSTEM – GOOD HEALTH AT HOME

INCREASE PATIENT ENGAGEMENT TO OPTIMIZE PATIENT OUTCOMES

Connected Care by Veridian Healthcare combines the latest innovations in connected devices and technology. This solution encourages patient engagement with their health, enables providers and RPM partners to monitor patient data in real time, and equips providers with actionable data when an intervention is required.

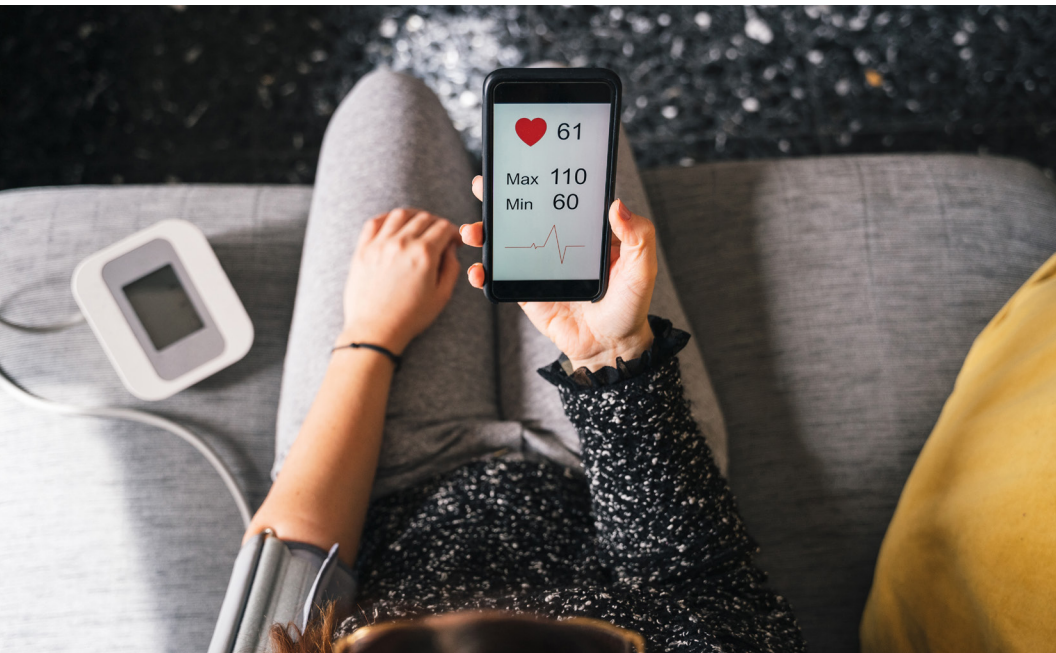

PATIENT MOBILE APPLICATION

CARE MANAGEMENT PORTAL (DASHBOARD)

PROVIDER MOBILE APPLICATION

Connected Care: Adding the human touch to virtual patient care.

Integrations via API are easily implemented for:

- Electronic medical records
- Connected home diagnostic devices
- Virtual patient visits including patient and provider video
- Incorporation of patient education content

Patient Experience

- Patient-owned mobile devices (iOS and Windows) collect and transmit data according to the customized monitoring plan aligned with provider's protocols.
- Mobile application is designed to encourage patient participation and motivate them to remain compliant with their care plan.
- Patients can communicate with their provider through the Connected Care software while at home or traveling.

Progress Monitoring

- Easy-to-interpret comprehensive dashboards are displayed for each patient.
- Condition-specific monitoring plans and diagnostic metrics are defined by the provider.
- Predictive modeling of biometric reporting and desired metrics are established by protocol.
- Variations from anticipated metrics can be configured to trigger escalation for provider intervention as appropriate.
